PROJECT SUMMARY

Ref No.: MRIC/SISM-IT-17	**Title:** Intelligent platform for online learning
Local Company: Restit Limitee	
Project Leader	
Mr Djameel Soobadar	Restit Limitee

TECHNICAL ABSTRACT

The project will offer a new version of the MYSCORE Academic Solution online platform for the public to access online courses and tutorials. The MYSCORE INTELLIGENT LEARNING FRAMEWORK has been designed and developed since 2019 by people with strong expertise in the education sector. By empowering teachers with the best technology and the training to make the most of it, and supporting students through individualized learning and rich, digital content, the outcome has exceeded our expectations; in some colleges where the solution is implemented, the success rate for School Certificate exams has moved from 60% to 95% over the course of a single year. With this project, we have the ambition to provide accessibility to the general public to serve teaching, learning and continuous training at national level. Accounts will be made available to each and everybody as the need to provide equal opportunities to all students whether in private institutions or public schools. Users will have access to unlimited courses, apply scientific principles in virtual labs or attempt quizzes for self evaluation, and hence create one' own individual pathway customized to the needs of the us.

Key Words: Academic, online platform, courses, tutorials
