Smart Sanitizer by Bonnier Group Ltd

Start date: 11th June 2020

Completion date: 13th January 2021

Output of project

The project involved the development of a sanitiser dispenser that would be accessible and adaptable to public spaces. Furthermore, the device models developed a smart add-on box that takes temperatures without the need for close proximity between staff and visitors.

One of the main features of the device models is its capacity in terms of volume which can hold up to 5 liters of sanitiser gel, reducing refill time and saving on plastic waste. The electronic infrared thermometer automatically reads temperature and has a light and sound indicator for those who are above 37.6°C. The unit can have customised colour and logo branding and this automated model is economic and hygienic.

This locally made-dispensers have received many commercial interests and were tested at the Super U, Grand Baie. So far, the applicant has received positive comments from customers as well as from staff for its easy use and 25 samples of the dispensers have already been completed and ready to be commercialized.
